

Solution Accelerator: Technical Debt Management

www.avolutionsoftware.com

Architects can guide CIOs and business leaders in understanding which IT assets to prioritize, when it's time to migrate, and the business costs and opportunities of doing so to avoid the build up of technical debt.

The Avolution consultant will work with your team to review the pre-built end-to-end solution comprising of data entry templates to capture Technical Debt and relationships to other model elements, pre-built analysis to calculate cost and ratio of Technical Debts and pre-built dashboards to highlight approved versus rejected Tech Debts. The Avolution consultant will guide customers through the implementation of the end-to-end solution over the course of 6 workshops. These 6 workshops ensure an understanding of the Technical Debt Management approach and provide an opportunity to refine analysis and outputs based on customer requirements.

Business Outcomes:

- Reduce costs and risk exposure by identifying, analyzing, and managing Technical Debt
- Create quick time to value with stakeholder-ready interactive dashboards.

Customers will be required to populate data entry and diagram templates using their data. Workshops will be consultant-led 2-4 hours worth of working sessions, with additional work outside of these workshops required by both the customer and the Avolution consultant (highlighted in grey boxes). Standard Use Cases will be implemented over 2-6 months, dependent on availability of data and customer's availability. For best experience, it is recommended that the Avolution consultant is granted access to customer's ABACUS environment. If access cannot be granted, it will be necessary for the customer to screen-share during workshops
