

# Solution Accelerator: Information Architecture & Data Architecture

www.avolutionsoftware.com

Map out information assets data flows, and data stores including building out Entity Relationship Diagrams to show data entities and their relationships. Show Data Flows, Processes, Metrics and Roadmaps.

The Avolution consultant will guide customers through the implementation of the end-to-end solution over the course of 6 workshops. These 6 workshops ensure an understanding of the Information Architecture and Data Architecture Use Case whilst the Avolution consultant works with your team to review the pre-built end-to-end solution. Data entry templates are readily available for users to begin populating in addition to pre-built analysis which feed pre-built dashboards. This approach also provides an opportunity to refine analysis and outputs based on customer requirements.

## Business Outcomes:

- Motivate decision-makers with dashboards that link data architectures with the business objectives and business capabilities they support
- Create quick time to value with stakeholder-ready interactive dashboards.

*Customers will be required to populate data entry and diagram templates using their data. Workshops will be consultant-led 2-4 hours worth of working sessions, with additional work outside of these workshops required by both the customer and the Avolution consultant (highlighted in grey boxes). Standard Use Cases will be implemented over 2-6 months, dependent on availability of data and customer's availability. For best experience, it is recommended that the Avolution consultant is granted access to customer's ABACUS environment. If access cannot be granted, it will be necessary for the customer to screen-share during workshops*
