

Solution Accelerator: Custom Scripting

www.avolutionsoftware.com

This Solution Accelerator allows for additional functionality to be developed or automated where it is not available out-of-the-box. Avolution Consultants will develop custom scripts on behalf of the customer based on agreed requirements. Typical scripts may include but are not limited to functionality for automating manual tasks, creating/updating/deleting elements/relationships/properties or users and permissions in bulk based on repeatable logic, creating or updating diagrams automatically and generating external reports.

This solution accelerator can be used to develop a single script or multiple scripts. Any scripts developed should be tested against future versions of ABACUS once such versions are available. The solution accelerator includes up to 24 hours consulting time which can be used over the course of 12 months. For best experience, it is recommended that the Avolution consultant is granted access to customer's ABACUS environment. If access cannot be granted, it will be necessary for the customer to screen-share during workshops and/or to send necessary details as part of the script requirements.
