

# Solution Accelerator: Custom Integration

www.avolutionsoftware.com

This Solution Accelerator allows seamless integrations between ABACUS and other tools, allowing data mastered externally to be imported and synchronized into ABACUS, or for data mastered in ABACUS to be exported and synchronized externally. Avolution Consultants will develop custom integrations with 3rd party systems, where an existing integration does not exist, based on agreed requirements. Typically, an API such as a REST API will be required on the 3rd party system, with access provided for the consultant to build and test the integration.

*This solution accelerator can be used to develop a single integration or multiple integrations. The solution accelerator includes up to 24 hours consulting time which can be used over the course of 12 months. For best experience, it is recommended that the Avolution consultant is granted access to customer's ABACUS environment. If access cannot be granted, it will be necessary for the customer to screen-share during workshops and/or to send necessary details as part of the integration requirements. Access is required for 3rd party system being integrated with. Any integrations developed should be tested against future versions of ABACUS once such versions are available.*
